PROJECTS

- **PIIShield – A utility for redacting Personally Identifiable Information** Oct 2025
Tools: Python (PyTorch), spaCy, Microsoft Presidio, LangChain, EasyOCR, MTCNN, facenet-pytorch, PyMuPDF 
 - Built a dual-format (PDF and image) PII redaction system, integrating Microsoft Presidio for text and MTCNN for facial detection.
 - Engineered specialized support for Indian documents (Aadhaar, PAN, Passport) using EasyOCR for text extraction and PyMuPDF for layout preservation.
 - Optimized a modular, stateless pipeline with GPU acceleration and centralized configurations for tunable confidence thresholds and blur radii.
- **Handyy – AI-Powered Hand Gesture Control System** 2025
Tools: Python, OpenCV, MediaPipe, NumPy, PyAutoGUI, PyCaw 
 - Engineered a real-time computer vision application that enables completely hands-free system control by tracking 21 dynamic hand landmarks simultaneously.
 - Implemented precise coordinate mapping and custom mathematical smoothing algorithms to translate physical finger movements into fluid, jitter-free mouse control and clicks via PyAutoGUI.
 - Integrated PyCaw for dynamic Windows audio manipulation, utilizing real-time distance calculations between gestures to adjust volume with on-screen visual feedback.
